CONTENTS

Preface

PART ONE - PLAIN CONCRETE

Materials for Concrete			1-25
1	1.1	Introduction	1
I	1.2	Cement	1
	1.3	Aggregate	5
	1.4	Water	6
	1.5	Admixture	7
	1.6	Tests on materials	11
	1.7	Porosity, moisture content and absorption of aggregate	17
	1.8	Grading of aggregate	18
	1.9	Measurement of materials	18
	1.10	Mixing, placing, compaction, and curing	21
	1.11	Mechanisation of concreting	22
	1.12	Special concretes	22
		Reference	24
		Exercises	25
Desig	n of Concr	ete Mix	26-54
า	2.1	Introduction	26
Z	2.2	Properties of concrete	27
	2.3	Information required for design	32
	2.4	Nominal mix concrete	34
	2.5	Methods of proportioning concrete mix	37
	2.6	High strength concrete	50

2.7Acceptance criteria51References53Exercises54

PART TWO - REINFORCED CONCRETE

Design Philosophies		57-68	
2	3.1	Introduction	57
3	3.2	Working stress design	58
	3.3	Ultimate load design	59
	3.4	Limit state design	62
	3.5	Limit state design vs working stress design	64
	3.6	Performance based design	65
	3.7	Building code	66

vii

CONTENTS

	3.8	Accuracy of computations	67
	3.9	Type of construction	67
		References	68
		Exercises	68
Definitio	ns		69-92
1	4.1	Introduction	69
4	4.2	Limit state	69
	4.3	Central value measures	70
	4.4	Measures of dispersion	71
	4.5	Normal distribution curve	72
	4.6	Characteristic strength	73
	4.7	Characteristic load	74
	4.8	Design values	77
	4.9	Partial safety factors	77
	4.10	Factored loads	78
	4.11	Stress-strain relationship for concrete	79
	4.12	Stress-strain relationship for steel	83
	4.13	Salient features of Eurocodes	86
		References	91
		Exercises	92
Singly Ro	einforced	Sections	93-114
-	51	Introduction	93
5	5.1	Bending of beams	94
	53	Assumptions	96
	54	Moment of resistance	97
	5 5	Modes of failure	98
	5.6	Maximum depth of neutral axis	99
	5.7	Limiting values of tension steel and moment of resistance	99
	5.8	Minimum and maximum tension reinforcement	100
	5.9	Effective span	101
	5.10	Types of problem	101
	5.11	Design tables	102
	5.12	Illustrative examples	103
		Exercises	114
Doubly F	Reinforce	d Sections	115-124
-	6.1	Tatas dustion	115
6	0.1	Introduction Stress in compression minforcement	115
-	0.2 6.3	Design stops	115
	0.3 6.4	Minimum and maximum rainforcement	110
	0. 4 6.5	Design tables	117
	0.J 6.6	Ulustrativo exemples	117
	0.0	Exercises	118
Flanged	Beams		125-136

CONTENTS

11.3 Cantilever beam	207
11.4 Arch action	211
11.5 Lintel over door	211
11.6 Lintel over verandah	214
11.7 Moment and shear coefficients for continuous beams	219
11.8 Inverted T-beam roof	219
11.9 Doubly reinforced beam	226
11.10 Beam with overhangs	230
11.11 Introduction to staircases	234
11.12 Staircase	238
Exercises	242
Torsion	244-259
10 12.1 Introduction	244
12 12.2 Torsional stiffness of sections	245
12.3 Equilibrium and compatibility torsion	246
12.4 Equivalent shear	246
12.5 Torsional reinforcement	247
12.6 Distribution of torsion reinforcement	248
12.7 Torsion in beams curved in plan	252
Exercises	259
Redistribution of Moments	260-274
10 13.1 Introduction	260
13 13.2 Single span beams	261
13.3 Multi-span beams	267
13.4 Design of sections	273
Exercises	274
Slabs	275-331
1/1 Introduction	275
14 14.2 One way slobe	275
14.2 Two way slabs	270
14.5 1 wo-way states 14.4 Circular slabs	205
14.4 Chediai siabs	270
